

CERTIFICATE OF RECLAMATION AND ENVIRONMENTAL SAFETY

SheerWeave Infinity 3% and 5%

SheerWeave Infinity, manufactured solely by Phifer Incorporated for the purpose of solar protection as an interior window treatment, is produced from a combination of TPO (Thermoplastic Olefin) core yarn and TPO coating. This unique composition eliminates the need to separate the core yarn from the coating for a short recycle stream ensuring sustainability. Infinity may be entered back into the raw material supply chain through existing methods and practices. Due to the products design and chemical integrity, Infinity's TPO is not compromised during the recycle process and is therefore capable of full restoration for the production of TPO components suitable for shade cloth and other high-quality materials.

Infinity originates from a design of safe and non-toxic ingredients that are produced from 100% post-industrial waste by-product. Lead and heavy metal free, every component of this TPO compound is heat and chemically stable.

Through Phifer's existing ISO 9002 Certification, all efforts to collect production waste within our manufacturing processes as well as the collection of fabrication scrap and fabric ready for disposal from the market place are processed and audited under the direction of the independent, third party International Standards Organization (ISO) by the requirements of the 9002 certification. The environmental safety of Infinity's chemical emissions is certified by the GREENGUARD Institute for Indoor Air Quality.
